

Deploying Spring Boot application on external Tomcat Server

Steps to be follow to deploy the Spring Boot application on an external tomcat.

Steps:

1. Add dependency in **pom.xml** to exclude embedded tomcat so that we can further deploy our war file on external tomcat.

```
<dependency>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-starter-tomcat</artifactId>
  <version>3.0.1</version>
</dependency>
```

2. Define SpringMain class by extending SpringBootServletInitializer class and override configure () method.

```
1 package com.valtech.health.app;
2
3 import org.springframework.boot.SpringApplication;
4
5
6
7
8 @SpringBootApplication
9 public class HealthAppApplication extends SpringBootServletInitializer {
10
11     public static void main(String[] args) {
12         SpringApplication.run(HealthAppApplication.class, args);
13     }
14
15     @Override
16     protected SpringApplicationBuilder configure(SpringApplicationBuilder application) {
17         return application.sources(HealthAppApplication.class);
18     }
19
20 }
```

3. Mention war as packaging and build the .war file application using maven build command.

Artifact

Group Id:	com.valtech.healthapp.application
Artifact Id:	* valtech-health-application
Version:	0.0.1-SNAPSHOT
Packaging:	war

Name	Date modified	Type	Size
classes	1/6/2023 6:04 PM	File folder	
generated-sources	1/6/2023 5:02 PM	File folder	
generated-test-sources	1/6/2023 5:02 PM	File folder	
HealthApp	1/6/2023 5:26 PM	File folder	
m2e-wtp	1/6/2023 6:04 PM	File folder	
maven-archiver	1/6/2023 5:26 PM	File folder	
maven-status	1/6/2023 5:02 PM	File folder	
surefire-reports	1/6/2023 6:09 PM	File folder	
test-classes	1/6/2023 6:04 PM	File folder	
HealthApp.war	1/6/2023 6:19 PM	WAR File	51,654 KB
HealthApp.war.original	1/6/2023 6:19 PM	ORIGINAL File	46,517 KB

Note: .War file is located in target folder

4. Download the tomcat 8.5 and extract it.

Name	Date modified	Type	Size
 bin	1/6/2023 5:38 PM	File folder	
 conf	1/4/2023 5:26 PM	File folder	
 lib	9/22/2022 11:59 AM	File folder	
 logs	1/6/2023 5:38 PM	File folder	
 temp	9/22/2022 11:59 AM	File folder	
 webapps	1/6/2023 6:18 PM	File folder	
 work	1/4/2023 5:26 PM	File folder	
 BUILDING	8/8/2022 7:26 AM	Text Document	21 KB
 CONTRIBUTING	8/8/2022 7:26 AM	Markdown Source...	7 KB
 LICENSE	8/8/2022 7:26 AM	File	57 KB
 NOTICE	8/8/2022 7:26 AM	File	2 KB

 setclasspath	8/8/2022 7:26 AM	Shell Script	4 KB
 shutdown	8/8/2022 7:26 AM	Windows Batch File	2 KB
 shutdown	8/8/2022 7:26 AM	Shell Script	2 KB
 startup	8/8/2022 7:26 AM	Windows Batch File	2 KB
 startup	8/8/2022 7:26 AM	Shell Script	2 KB
 tcnative-1.dll	8/8/2022 7:26 AM	Application exten...	2,552 KB
 tomcat8	8/8/2022 7:26 AM	Application	140 KB
 tomcat8w	8/8/2022 7:26 AM	Application	124 KB

7. Configure the tomcat-users file in conf file, add the users to manage the deployment.

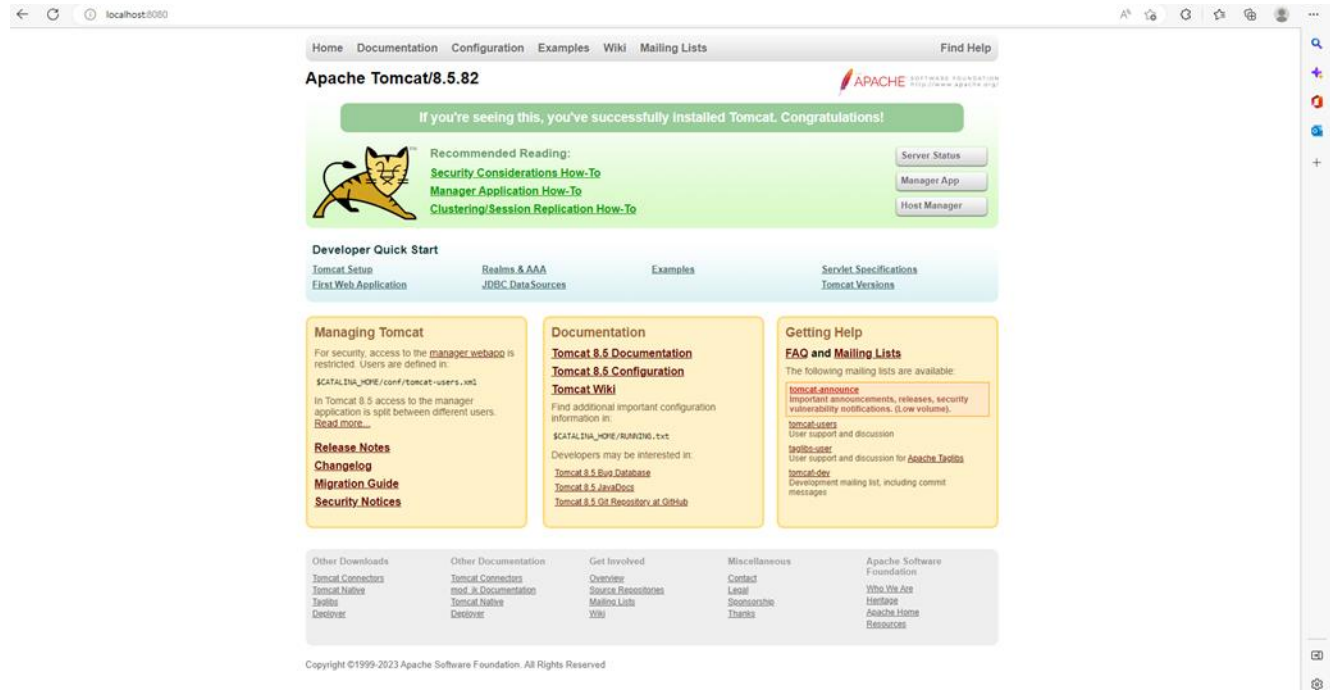

The users below are wrapped in a comment and are therefore ignored. If you wish to configure one or more of these users for use with the manager web application, do not forget to remove the `<!-- ... -->` that surrounds them. You will also need to set the passwords to something appropriate.

-->

```
<user username="admin" password="admin" roles="manager-gui"/>
<user username="robot" password="robot" roles="manager-script"/>
```

8. You can start the tomcat server using command startup.bat

9. Open browser and type localhost:8080 to open Apache Tomcat/8.5.82 dashboard.

10. Click on manage apps and start the spring application on tomcat server.

11. Click on the application URL / HealthApp (i.e. war file name in webapps), mention application home URL [http://localhost:8080/ HealthApp /home](http://localhost:8080/HealthApp/home)

Finally, the application is deployed on External Tomcat server.

Prerequisites to be followed to deploy in tomcat.

- Make sure you add the tomcat dependency in pom.xml.
- Then build the .war file and that will be created in target folder and You can name that war file using `<finalName> HealthApp </finalName>` in pom.xml inside build tag.
- The URL [http://localhost:8080/ HealthApp /home](http://localhost:8080/HealthApp/home) here HealthApp is the name of the war file.
